1. What Crafting Core Is

Crafting Core is a GM-authoritative crafting, harvesting, material, and Recipe-knowledge framework for Foundry Virtual Tabletop. It is built specifically for D&D 5e 5.3.3 on Foundry VTT 14.

The module is designed around a simple loop:

1. The GM prepares or discovers **Items** that can act as materials, ingredients, or outputs.
2. The GM creates a **Recipe Draft**.
3. The GM deliberately publishes a **Knowledge Source**.
4. A Character receives the Knowledge Source and uses **Learn Recipe**.
5. The Character crafts from the **Crafting** section of the Actor sheet.
6. Harvesting, gathering, hunting, vendors, loot, and curated content feed more Items back into the same loop.

Crafting Core uses native D&D 5e Item documents rather than a parallel custom inventory system. Any D&D 5e Item can be used as an ingredient or output.

This manual documents the v0.3.0 test-candidate feature set built from the live-validated v0.2.4 stable baseline. Release history is maintained separately in `CHANGELOG.md`.

2. Compatibility and Optional Integrations

Foundry and D&D 5e

- Foundry VTT: minimum 14, verified 14.365
- D&D 5e: 5.3.3

Crafting Core is intentionally version-bound to the D&D 5e system version it was built and tested against.

Item Piles

Item Piles is optional.

When active, Crafting Core can use Item Piles for:

- Hidden Item Piles generated from the Material Generator;
- physical corpse-loot handling for Token Harvest.

Crafting Core remains responsible for harvest and generation rules. Item Piles is an output/container integration.

DnD 5e Item Creator

The core Crafting Core module does not require Item Creator.

The official persistent **Curated Food and Alcohol** Products require **DnD 5e Item Creator 0.7.1 or newer**. Item Creator supplies the persistent consumable-effect runtime, while Crafting Core defines the official Product/Recipe metadata and adds the Curated 6-hour-or-Rest cleanup rules. Non-Alcoholic Drinks use ordinary instantaneous D&D 5e healing and do not create a persistent effect.

3. The Three Managed Compendiums

Crafting Core uses private world Compendiums as durable content stores and interoperability boundaries.

Crafting Core - Materials

Contains the curated material catalog and GM-registered material Items.

The current built-in catalog contains **230 materials**, including **Sugar Cane** as a Common cultivated culinary/brewing ingredient.

These are native D&D 5e Loot Items with Trade Good type and stable Crafting Core metadata.

Crafting Core - Learn Sources

Contains published Knowledge Items such as:

- Recipe;
- Formula;
- Blueprint;
- Manual.

This Compendium is the authoritative published Knowledge database.

The **Knowledge Base** inside Crafting Core is a management view of these actual Compendium Items. It is not a second database.

Crafting Core - Products

Created and maintained when the Curated Product library is available.

It contains **58 official ready-to-buy/use Products**: 15 Meals, 28 Alcoholic Drinks, and 15 Non-Alcoholic Drinks. This makes them convenient for:

- taverns;
- vendors;
- loot;
- NPC inventories;
- Supplier-style stock generation;
- Recipe outputs.

4. Opening Crafting Core

As GM, open the **Item Directory**.

Crafting Core adds two convenient launch buttons:

- **Crafting Core** - opens the main GM application;
- **Generate Materials** - opens the material generation workflow directly.

The main Crafting Core application contains:

- Drafts;
- Knowledge Base;
- Materials;
- Generate;
- Scanner;
- Open Compendium.

5. Recipe Drafts and the Recipe Builder

A Recipe Draft is private GM authoring state. It is not automatically visible to players and does not change a published Recipe until the GM publishes again.

Creating a Draft

Click **New Recipe Draft** and configure the Recipe.

The Builder is organized in a logical sequence.

Identity and Crafting Mode

A Recipe has a stable internal Recipe ID and can use one of two crafting modes:

- **Timed / Seconds;**
- **Crafting Project.**

The stable Recipe ID is more important than the display name. Renaming a Recipe does not make it a different Recipe.

Who Can Craft

The Recipe can define relevant proficiencies and whether:

- anyone may attempt the craft; or
- relevant proficiency is required.

Multiple relevant proficiencies can be configured according to the Recipe's access policy.

Ingredients

Any D&D 5e Item can be dragged into the ingredient list.

Crafting Core Materials are an organized source for automated systems, not a restriction on Recipe design.

Examples of valid ingredients include:

- a harvested material;
- a Potion;
- a sword;
- a custom Item Creator Item;
- another crafted Product.

Quantities are configured per ingredient.

Output

Drag the final Item into the output area.

Crafting Core stores the complete Item snapshot needed to reproduce it when the craft completes, including supported Activities, Effects, and flags.

Player Visibility

The GM can decide which parts of a Recipe the player can see, including information such as:

- ingredients;
- ingredient quantities;
- output;
- crafting time;
- relevant proficiencies;
- attempt policy;
- progress checks and DCs;
- failure consequences;
- Extra Effort;
- Final Crafting Check;
- descriptions and other Recipe details.

Hidden information remains stored and enforced even when it is not shown on the Character sheet.

6. Timed Crafting

Timed crafting is the simpler workflow.

The Recipe defines a duration in seconds.

When the player starts a valid craft:

1. Crafting Core validates access, proficiency policy, and inventory.
2. Required ingredients are consumed.
3. A synchronized timed job is stored on the Actor.
4. Closing and reopening the sheet does not reset the timer.
5. At completion, the frozen output snapshot is created in the Character inventory.

If a Final Crafting Check is configured, the Recipe uses the configured D&D 5e roll and failure policy.

7. Crafting Projects

Crafting Projects are persistent crafts intended to span multiple work cycles and rests.

Only one active Project is maintained on the Actor at a time.

Starting a Project

When a Project starts:

1. the GM-side transaction validates the current published Recipe and Character eligibility;
2. required materials are removed from normal inventory;
3. material snapshots are stored as reserved Project materials;
4. the Project stores a frozen Recipe snapshot;
5. the first normal Work Attempt happens immediately.

Later Recipe edits do not rewrite the active Project.

Work Periods and Rest Cadence

A Project defines a required number of Work Periods and a cadence:

- Short Rest; or
- Long Rest.

A compatible rest **unlocks** the next normal Work Attempt. The rest does not add progress by itself.

Progress Checks

Progress Checks can be:

- disabled;
- required every Work Period;
- required at the Project midpoint.

Supported check families include:

- Ability;
- Skill;
- Tool;
- Saving Throw.

Failure can be configured to:

- make No Progress;
- Regress the Project;
- Fail the Project.

If Project failure is configured, the GM can also decide whether a percentage of reserved materials is lost.

Extra Effort

Extra Effort is an optional second attempt in the same work cycle.

It has its own check and can grant additional Work Progress on success.

Extra Effort does not reserve or consume the ingredients a second time.

Final Crafting Check

A Project can require a Final Crafting Check after the required Work Progress has been reached.

Final failure behavior can be configured around the same native D&D 5e roll system, including outcomes such as:

- stay ready and try again later;
- regress the Project;
- fail the Project.

Cancellation and Failure

Cancelling returns all still-reserved materials.

If the Project fails, reserved materials are returned except for any explicitly configured failure loss.

8. Drafts, Publication, and the Knowledge Base

Crafting Core deliberately separates **authoring** from **publication**.

Save Draft

Save Draft saves only the private Builder state.

It does not change:

- the published Knowledge Source;
- Character knowledge;
- an active Project.

Publish to Private Compendium

After saving a Draft, use **Publish to Private Compendium**.

The Knowledge Source is materialized in **Crafting Core - Learn Sources**.

The published Compendium Item becomes the authoritative definition.

Update Published Source

If a published Recipe is edited as a Draft, the old published version remains active until **Update Published Source** is used.

This allows the GM to work safely without changing what players currently know.

Knowledge Base

The Knowledge Base reads the actual Learn Sources Compendium and can:

- inspect a published Recipe;
- open the published Item;
- use **Edit as Draft / Continue Editing**;
- recreate a deleted Builder Draft from the published definition;
- show whether the Builder Draft is synchronized or has unpublished changes;
- Unpublish the global source.

Delete Builder Draft

Deleting a Builder Draft removes only the private editing state.

It does **not** remove the published Knowledge Source.

A published Recipe can later be reopened as a Draft from the Knowledge Base.

9. Learning, Unlearning, and Unpublish

Learn Recipe

A published Knowledge Source can be distributed through ordinary Foundry workflows:

- direct Compendium to Actor drag-and-drop;
- Compendium to Item Directory, then Actor;
- loot;
- chests;
- NPC inventories;
- vendors or Supplier-style stock.

The Item contains **Learn Recipe**.

Using it teaches the stable Recipe identity to that Character.

Two different physical copies of the same published Recipe do not create duplicate learned Recipes.

Unlearn

The Character Crafting tab includes a compact **Unlearn** control.

Unlearn uses a checkbox confirmation and removes the Recipe only from that Character.

The Recipe can be learned again later from a valid Knowledge Source.

Unlearn is blocked when required by active Project safety.

Unpublish

Unpublish is a global destructive action and requires typed **I AGREE** confirmation.

Unpublish:

- removes the authoritative Learn Sources Item;
- reconciles Character knowledge so Characters forget the Recipe;
- leaves already-started Projects intact because they use frozen snapshots.

Republishing a Recipe later does not automatically reteach it to Characters who previously forgot it.

10. Recipe Updates and Stale Player Views

Published Recipe updates are applied to Character knowledge from the authoritative Compendium definition.

If a player is currently viewing an older Recipe revision when the GM publishes an update, Crafting Core does not silently execute a transaction against the stale view.

When the player next clicks **Craft** or **Start Project**:

1. the Recipe view is refreshed;
2. the player is told that a newer publication is available;
3. no materials, rolls, reservations, or progress are changed;
4. the player reviews the updated Recipe and clicks again.

Active Projects are not affected because they use their frozen start-time snapshot.

11. Materials Catalog

The built-in catalog contains **229 curated materials**.

Families and Organization

The Materials Compendium is organized around categories such as:

Creature Harvest

Creature-family materials intended for Harvest Profiles and manual Creature Harvest.

Essences

Magical/energetic materials used by the separate Essence layer.

Gathering

- Flora;
- Roots;
- Fungi;
- Wood & Resin;
- Minerals & Geological.

Profession & Trade

- Food & Cooking;
- Metalworking;
- Leatherworking;
- Alchemy;
- General Materials.

Rarity Economy

The default material economy is:

Rarity	Default Value	Default Drop Chance
Common	5 gp	65%
Uncommon	25 gp	35%
Rare	100 gp	15%
Very Rare	500 gp	5%
Legendary	1,000 gp	1%

These are defaults. The GM can override material values and chances.

Material Icons

Built-in materials use curated Foundry Core icon candidates.

The Materials UI allows the GM to choose among the available candidates. A custom icon outside the curated shortlist can also be preserved.

Custom Materials

A GM may register an existing world Item as a Crafting Core Material.

Registered custom materials become available to Crafting Core automation without changing the fact that any D&D 5e Item can be used directly in a Recipe.

12. Curated Products, Servings, and Drinks

The official Curated Product library provides ready-to-use consumables and matching learnable Recipes for taverns, merchants, loot, NPC inventories, Supplier-style stock generation, and player crafting.

It requires **DnD 5e Item Creator 0.7.1+** for persistent Food and Alcohol effects. The library contains:

- **15 Meals;**
- **28 Alcoholic Drinks;**
- **15 Non-Alcoholic Drinks;**
- **58 Products in Crafting Core - Products;**
- **58 matching Recipe Knowledge Sources in Crafting Core - Learn Sources.**

Every Product remains an individual sellable serving. The corresponding Recipe may create several servings in one craft.

Shared Batch Economy

Official Curated Products target approximately:

Total batch value = 2 x current ingredient cost

The individual Product price is then calculated as:

Unit price = total batch value / Recipe yield

This keeps the commercial Item useful as a single tavern/vendor unit while making bulk crafting economically sensible. All official Curated Product Recipes use **10 seconds** of crafting time.

Meals

Food effects belong to one shared **Food family**. A new Curated Food replaces the previous Curated Food effect; two Curated Foods do not stack. Food is independent from Alcohol, so one active Food and one active Alcohol effect may coexist.

Meal duration is **up to 6 hours or until the next Short Rest, whichever happens first**. A Long Rest also removes the effect.

- **Hearty:** 5 Temporary Hit Points.
- **Energizing:** +5 ft Walking Speed.
- **Complete:** +5 Maximum Hit Points and +5 ft Walking Speed.

Complete Meal Maximum HP is temporary. When the effect ends, maximum HP returns to normal and current HP is capped to the resulting maximum if necessary. Food-owned Temporary HP is tracked conservatively so expiration/rest cleanup does not erase unrelated Temporary HP that later replaced it.

Meal Recipes produce **1 to 4 servings**, according to the size and nature of the preparation.

Product	Culture	Type	Benefit	Yield	Ingredients
Forge Stew	Dwarven	Hearty	5 Temp HP	3	Basic Wild Boar Meat x1, Potato x1, Carrot x1
Hot-Stone Ribs	Dwarven	Hearty	5 Temp HP	2	Basic Deer Meat x1, Salt x1, Seasonings x1

Messenger's Bread	Common	Energizing	+5 ft Speed	2	Bread x1, Honey x1, Apple x1
First Bell Eggs	Common	Energizing	+5 ft Speed	1	Eggs x1, Bread x1, Seasonings x1
Adventurer's Breakfast	Common	Complete	+5 Max HP +5 ft Speed	2	Eggs x1, Basic Game Bird Meat x1, Bread x1, Potato x1

Alcoholic Drinks

Alcohol belongs to a separate shared **Alcohol family**. A new Curated Alcohol replaces the previous Curated Alcohol effect. Two Alcohol drinks therefore do not stack, while Food and Alcohol may coexist.

Alcohol duration is **up to 6 hours or until the next Short Rest, whichever happens first**. A Long Rest also removes it.

Alcohol Ability Rules

- Cheap alcohol applies one **-1 Ability Score** penalty.
- Proper and Reserve alcohol normally apply **+2 to one Ability Score and -4 to another**.
- Alcohol never grants positive Constitution.
- INT/WIS-positive drinks are intentionally mild, low-proof, tranquil, or contemplative in theme.

- Curated Alcohol cannot raise an Ability Score above **20** or reduce it below **1**.
- More expensive alcohol does not automatically gain a stronger mechanical effect; price may represent ingredients, prestige, aging, rarity, or lower batch yield.

The initial positive-bonus distribution is **STR x4, DEX x4, INT x3, WIS x3, CHA x6, CON x0**.

Batch yields are **100 servings for Cheap, 20 for Proper**, and **10 for Reserve**.

Product	Tradition	Tier	Effect	Yield	Ingredients

Non-Alcoholic Drinks

Non-Alcoholic Drinks intentionally do not create a separate persistent subsystem. They are ordinary Consumables that heal immediately and finish.

- **Simple:** restore 1 HP, yield 100.
- **Prepared:** restore 2 HP, yield 40.
- **Specialty:** restore 3 HP, yield 30.

Healing cannot exceed Maximum HP. These Products create no persistent Active Effect, cooldown, stacking family, or Rest tracking.

Product	Tradition	Tier	Effect	Yield	Ingredients
Fresh Cane Juice	Mundane	Simple	Restore 1 HP	100	Sugar Cane x1
Barley Water	Mundane	Simple	Restore 1 HP	100	Barley x1
Honeyed Apple Cider	Mundane	Prepared	Restore 2 HP	40	Apple x1, Honey x1
Berry Cordial	Mundane	Prepared	Restore 2 HP	40	Wild Berries x1, Honey x1
Harvester's Tonic	Mundane	Specialty	Restore 3 HP	30	Apple x1, Carrot x1, Honey x1
Miner's Barley Water	Dwarven	Simple	Restore 1 HP	100	Barley x1

Greenpath Tonic	Elven	Prepared	Restore 2 HP	40	Apple x1, Elvenleaf Herb x1
Dawnleaf Cordial	Elven	Specialty	Restore 3 HP	30	Apple x1, Honey x1, Elvenleaf Herb x1
Summer Court Nectar	Elven	Specialty	Restore 3 HP	30	Grapes x1, Wild Berries x1, Honey x1

Sugar Cane

Sugar Cane is a Common cultivated Material in **Crafting Core - Materials**. It is not restricted to Cachaça and is intended to support future Rum, Molasses, Sugar, Syrup, Desserts, Preserves, fermented drinks, and other Recipes.

Product Icons

The **Materials & Products** interface exposes all 58 official Products. Each has three Foundry Core icon candidates. Choosing an icon updates the official Product and re-synchronizes the Recipe output presentation.

Restore Curated Product Defaults

Use **Restore Curated Product Defaults** to repair the official library. The restore process can recreate missing official Products and Recipe Sources, update managed defaults, and repair family/culture folder placement without treating private Builder Drafts as publication authority.

The Product Compendium is organized under **Culinary -> Meals / Alcoholic Drinks / Non-Alcoholic Drinks**, followed by culture/tradition folders. Learn Sources are organized under **Crafting Core Curated** with corresponding family and culture branches.

13. Creature Scanner

The Creature Scanner analyzes configured Actor sources without modifying source Actors or Compendiums.

Configuring Sources

Open:

Game Settings -> Crafting Core -> Configure Crafting Core

Select Actor sources and define their priority.

Module/system sources are selected at source/package level and Crafting Core resolves compatible Actor Compendiums. World Actor Compendiums can also be selected.

Scanning

The Scanner:

- pre-filters Actor Compendium indexes;
- loads eligible NPCs in bounded batches;
- analyzes structural evidence;
- stores Harvest Profiles as Crafting Core world metadata.

The Scanner UI can:

- search profiles;
- edit a profile;

- reanalyze the source Actor;
- delete only the stored profile.

14. Harvest Profiles

A Harvest Profile describes what one source Actor can generate.

Inferred Anatomy

The analyzer uses stronger evidence before weaker incidental text.

Signals can include identity, creature type, structural features, movement, attacks, damage, equipment, and other Actor data.

The editor exposes anatomy tags for GM review and correction.

Four Automatic Rarity Pools

The current model uses four automatic material pools:

1. Common;
2. Common / Uncommon;
3. Rare;
4. Very Rare / Legendary.

Each successful pool selects exactly one candidate material. Adding more candidate materials increases variety, not the number of automatic drops.

Pool chance and material selection remain separate from Pinpoint Overrides and Essence.

Essence Pool

The fifth slot is a separate magical Essence layer.

Profiles with supported non-physical affinity can roll between:

- Arcane Essence;
- a supported specific Essence.

Profiles without supported affinity use the Arcane/no-Essence fallback behavior.

Essence inference is based on supported non-physical evidence. Physical bludgeoning, piercing, and slashing damage are not Essence affinities.

Pinpoint Overrides

Pinpoint Overrides are explicit GM-authored extra rolls.

They are intended for:

- quest materials;
- boss materials;
- guaranteed special drops;
- bespoke campaign rewards.

A Pinpoint Override does not consume one of the four normal rarity-pool results.

15. Generate Materials

The **Generate Materials** tool uses one shared rules engine and supports three source types.

Creature Harvest

Manual Creature Harvest can generate from creature-family/material eligibility without requiring a Token workflow.

Environment Gathering

Environment Gathering combines biome/resource selections and abundance. Gathering categories are not biome-exclusive; a biome can support several resource families where the material metadata allows it.

The GM resolves any skill check outside Crafting Core. The generator handles material eligibility, chance, quantity, and preview.

Game Hunt

Game Hunt provides a hunting-oriented material generation path using the same catalog and preview/materialization boundary.

Preview First

Generation first creates a pure preview result.

The GM can then choose how to materialize that exact preview.

Materialization does not reroll the result.

Destinations

Supported destinations include:

- a timestamped World Item folder beneath **Crafting Core - Generated Loot**;
- a **Hidden Item Pile** when Item Piles is active.

16. Token Harvest and Existing NPC Loot

Token Harvest uses stored Harvest Profiles for eligible dead Tokens and requires Item Piles for corpse conversion.

Loot Handling Modes

Configure Token Harvest in **Configure Crafting Core**.

Normalize from Compendiums

Recommended mode.

Physical candidates are replaced with safe base matches from configured Item Compendiums. Unmatched candidates are removed. Generated Harvest, Essence, and Pinpoint results are preserved.

Normalization does not fuzzy-match unique monster gear. It prefers safe identifiers/base Items or exact name + Item type matching.

Remove All Existing Items

Existing NPC inventory is removed before generated Crafting Core loot is used.

Keep Physical Gear / Remove Natural & Features

Keeps physical equipment while filtering natural attacks/features and similar non-loot entries.

Keep All Existing Items

Preserves the Item Piles-converted corpse inventory and appends Crafting Core Harvest.

Optional Firearm Homebrew

When Normalize mode is active, an optional setting can convert firearm gear to a random:

- Hand Crossbow;
- Light Crossbow;
- Heavy Crossbow.

The replacement is resolved from the configured normalization sources.

17. Game Settings

The Crafting Core entry in Foundry Game Settings presents:

- **Support the Creator;**
- **Configure Crafting Core;**
- **More from Hammer-PvP.**

The internal Configure Crafting Core window is kept focused on functional settings.

Current functional settings cover:

- Creature Scanner Actor sources;
- source priority;
- Token Harvest loot-handling mode;
- Gear Normalization Item Compendiums and priority;
- optional Firearms-to-Crossbows behavior.

18. Suggested GM Workflows

Creating a New Custom Recipe

1. Open Crafting Core.
2. Create a New Recipe Draft.
3. Configure mode, access, checks, visibility, ingredients, and output.
4. Save Draft.
5. Publish the Knowledge Source.
6. Distribute a copy to the Character.
7. Use Learn Recipe.
8. Craft from the Character sheet.

Editing a Published Recipe Safely

1. Open Knowledge Base.
2. Choose **Edit as Draft** / **Continue Editing**.
3. Make changes.
4. Save Draft.
5. Test or review privately as needed.
6. Use **Update Published Source** when ready.
7. Existing learned Recipes update from the publication; active Projects remain frozen.

Cleaning Up Builder Drafts

After publishing, it is safe to use **Delete Builder Draft** if the GM wants a smaller Draft list.

The published Knowledge Source remains in Learn Sources and can later recreate the Draft from Knowledge Base.

Making a Tavern Stock Source

1. Use the official Products Compendium as the ready-made Meal/Drink source.
2. Use Learn Sources when the vendor should sell Recipes instead of prepared consumables.

3. Use the Materials Compendium when the vendor sells ingredients.
4. Products remain unit-priced while Recipe outputs preserve their serving/batch yield.
5. A Supplier-style module can consume those Compendiums without needing to understand the Recipe Builder's private Draft state.

19. Troubleshooting

A Character cannot see a Recipe

Check that:

- the Recipe is published in Learn Sources;
- the Character actually used Learn Recipe;
- the Character still has the learned Recipe flag after reload;
- the source was not Unpublished.

A Builder Draft was deleted

This is not a problem if the Recipe was already published.

Open Knowledge Base and use **Edit as Draft** to recreate the private Draft from the published source.

A published Recipe changed while a player was looking at it

The next Craft/Start Project action refreshes the Recipe view first and asks the player to review the new publication before trying again.

An active Project uses old Recipe values

This is expected. Projects intentionally use the frozen Recipe snapshot from the moment the Project started.

A Curated Product is missing

Confirm DnD 5e Item Creator 0.7.1+ is active, then open **Materials & Products -> Curated Products** and use **Restore Curated Product Defaults**.

A Food or Alcohol effect does not expire

Persistent Curated Food and Alcohol effects use Item Creator for their timed runtime and Crafting Core for the Short/Long Rest boundary. Confirm Item Creator 0.7.1+ is active and that the Item came from the official Curated Product library.

Food and Alcohol stacking

One Food and one Alcohol may coexist. A second Food replaces the previous Food family; a second Alcohol replaces the previous Alcohol family. Non-Alcoholic Drinks heal instantly and do not participate in either family.

Materials are missing from generation

Open the Materials catalog and synchronize/restore the catalog before retrying the generation or Token Harvest workflow.

Token Harvest is unavailable

Token Harvest requires:

- an eligible dead Token;
- a stored Harvest Profile;
- Item Piles active;
- required Crafting Core material Items available.

20. Quick Reference

Action	Meaning
Save Draft	Save private GM editing state only
Publish	Create the authoritative Learn Sources Item
Update Published Source	Make Draft changes live
Knowledge Base	Manage actual published Learn Sources Items
Learn Recipe	Teach one stable Recipe to a Character
Unlearn	Remove that Recipe from one Character
Unpublish	Remove the global authoritative source and reconcile Character knowledge
Delete Builder Draft	Delete private editing state only
Start Project	Reserve materials, freeze Recipe snapshot, and perform first Work Attempt
Rest	Unlock the next compatible normal Work Attempt; does not add progress
Restore Curated Product Defaults	Repair the official 58-Product / 58-Recipe Curated library

Crafting Core is designed to remain useful by itself. The companion modules can extend adjacent parts of the same Foundry VTT workflow.

22. Documentation Policy

The repository `docs/` directory intentionally contains **one current manual only**.

When Crafting Core advances, replace that manual rather than accumulating obsolete manuals, architecture drafts, release notes, or public-page copies inside `docs/`.

- `README.md` describes the current module and its mechanics.
- `CHANGELOG.md` records release-by-release changes.
- `docs/Crafting-Core-Complete-Manual.pdf` is the current complete manual.
